- Integration with classweb.link for online bookings
- Integration with access turnstiles & doors

## Easy to use and easy to book

The applauded features of class.link include the fantastic visual scheduler that allows users to access a range of classes through a simple to use and powerful window. It is quick and easy to match levels, teachers, ages and times for parents wanting to book multiple students at different levels. Colour coding of levels allows users to match levels to their programs making the booking process even easier for staff. The booking wizard guides users through the process, allowing even the most unexperienced user to work through with ease.

## Integration to pos.link & retention.link

Most class booking programs on the market, require staff to make too many decisions. Class.link automatically calculates fees and pro rata's allowing staff having to do no more than choose the class the student wants to attend. The integration to pos.link not only includes the financial aspect but also integration with all types of attendance features including RFID, Barcode or magnetic card entry along with automated entry for those without receptions. Many options allow you to run your business the way you choose, not the way the software dictates.

## Extra Features

To compete with your competitors you need to be on top of your game offering the list extras that others don't. Without the additional high staff costs involved to do this. With class.link keeping accurate level and skill records for individual's, communication from one teacher to another is accurate and up to date. This allows teachers to focus on what they do best – just teaching! Automatic reminders through the retention module will enable you to follow up customers and keep the communication channels open without undue work.
