 - Instant attendance view
 - Colour coding for booking types
 - Paid/Unpaid status
- User security options
- Integrated web bookings

Easy to use schedule

Are you ever frustrated that you can't see all the resources you need to see in one view? In facility.link you decide how you setup your facilities, allowing you to view them they way you like. With a great colour coded visual booking scheduler, users can easily see if a booking is paid, attended or tentative.

The quick booking features allow users to quickly enter bookings, saving time at reception. The automatic pricing will ensure that once a customer is entered, the pricing will be automatically set for that customer group.

Integration with pos.link & retention.link

There is no need for data entry errors to cause customers to be charged the wrong amounts. The instant transfer of information from facility.link to pos.link allows users to charge for bookings either through Point of Sale or to place the charges on account for invoicing at later date. The integration with retention.link allows users to setup personal training and gym appointments with ease and allows booking from reminders set within the retention module. The module also allows integration with the standard email and SMS capabilities of links.

Usage Reporting

Do you have a sports stadium that is used for multiple sports but you never quite know which sports should take priority? The prime usage feature of facility.link allows you to specify what the facility is being used for and report accordingly. Maybe you are better off just offering badminton and not basketball!
