

RFID & access.link®

- Turnstile Control
- Internal & External Door Access
- Gender security for change rooms and private areas
- Complete project management
- Onsite consultation and installation
- RFID, Barcode or Fingerprint integration

RFID

Some current key Benefits of the technology are as follows;

- The ability for easier full access control throughout the club or centre.
- Access control for membership lockers (no more keys or numbers to remember).
- Locker doors are alarmed if broken into and now you can assign them to a particular member if you wish.
- Money can be stored on the cards for internal purchases so that members do not have to bring in wallets etc.
- One thousand members placing one hundred dollars each on their membership card has proven to increase secondary spending while giving owners a nice slush fund waiting for the money to be spent.
- RFID can be used for purchases at vending machines freeing up staff at reception. Gloves, ear phones, health bars etc can all be placed in a vending machine.
- If you have swimming pools or do not want to use cards then you can use waterproof wrist bands that have all the same benefits.

Lockers

In conjunction with Interloc Lockers and Gantner Technologies, Links Modular Solutions has created the perfect solution for automatic locker entry and management. RFID technology allows a member to swipe their unique identifying card to gain access and re-entry any number of times and will even prompt the member should they forget their locker number or leave behind personal items which can be collected on their behalf. Users have the option of either battery operated lockers or hard wired lockers. The benefit of hard wired lockers is that they are controlled by Gantner Software which can display locker usage and even open lockers from one easy to use screen at reception.

Turnstile, gate & door access control

As your business grows, you will find that demands on staff increase and quality staff to member interaction decreases. By introducing access.link entry control systems you can allow your members who wish to gain automatic entry an easy and no fuss solution, whilst allowing your reception and service staff to focus on important member interaction with prospects, bookings and profit generating activity. With access.link and a complete RFID solution users can benefit from having seamless entry into the club along with an access pass that grants them entry to the areas of the facility that their membership allows. With intelligent door control, you can restrict members by membership type and gender allowing greater control of your areas.

Cash on card

For security and convenience, members prefer to not carry cash or credit cards to purchase goods and services within a centre. To focus reception staff on important tasks such as Membership Sales, centre managers prefer their staff not to be spending time on simple goods and services transactions.

Links Modular Solutions is proud to be the first facility management system to offer a cash on card solution. Customers can place cash on card for use throughout the facility including at vending machines selling items from water to headphones. Links Modular Solutions tracks the member transaction providing easy to use financial reports for reconciliation. This also reduces staffing costs of kiosk areas, and will increase your sales of ancillary items as it reduces the need to carry cash.
