- Invoice checking against delivery dockets
- Know your profit margins
- Analyse product types to maximise sales
- Low level warnings
- Numerous reports

Inventory Control

Are you tired of keeping manual records of your stock, or no records at all? Don't waste valuable time each month tracking orders, deliveries and monitoring how much you are making on your merchandise. Stock.link will take care of your purchase orders, match them to delivery dockets and then ensure when you are invoiced that you are not overcharged.

Stock take

Stock is a valuable asset of any retail business and the management of stock levels is essential to success. To achieve this stock.link provides an easy to use stock take as well as automated ordering based on minimum levels. Stock can also be micro managed at location or store level to assist in control of your valuable stock.

Reporting

Too often many business owners tell us that they have no idea of the margins they are making on stock and even what is worth selling. Merchandise and Kiosk sales can be a great money earner, but you need to be selling the right products at the right margins. Stock.link's integration with report.link ensures that you are maximising profit all whilst saving valuable work hours and staffing cost.
